

Performance Summary

Index Code	HSIEAIGT
Factor	Multi
Asset Class	Multi Assets
Index Source	Solactive
Region	Global
Live Date	2022-10-17
Vol Target	VT 7%
Start Date	2005-12-06
Currency	USD
Style	Smart Beta
Index Fees	0.50%

The HSBC AI Global Tactical Index (HSBC AIGT) is a rules-based investment strategy that uses advanced techniques in Artificial Intelligence to invest opportunistically across a global portfolio of Equities, Gold and Bonds. It is a risk controlled, excess return index developed by HSBC and utilizes AWS technology to automatically adapt its approach as market dynamics change.

Risk Metrics

	10 Years	5 Years	3 Years	Live	1 Year	6 Months

Global Tactical Index

An Artificially Intelligent Global Investment Strategy | Oct 2023 | USD

Disclaimer

This communication includes past performance data related to select indices developed by the Index Sponsor and published by the index Calculation Agent. This disclaimer is intended to highlight the risks inherent in assessing such performance data. Index performance data included in this communication are accompanied by a footnote specifying the relevant Index Base Date and Index Live Date. The Index Base Date is defined as the first date for which the level of the index has been calculated. The Index Live Date is defined as the date on which the index rules were established and the index was first published. In assessing past performance, it is important to distinguish Past simulated index performance from Past index performance:

Past simulated index performance

Past simulated index performance refers to the period from the Index Base Date to the Index Live Date. This performance is hypothetical and back-tested using criteria applied retroactively. It benefits from hindsight and knowledge of factors that may have favorably affected the performance and cannot account for all financial risk that may affect the actual performance of the index. It is in HSBC's interest to demonstrate favorable simulated index performance. The actual performance of the index may vary significantly from the past simulated performance. Past simulated index performance is not a reliable indicator of future performance.

Past index performance

Past index performance refers to the period from the Index Live Date to the date of this presentation. This performance is actual past performance of the index. Past index performance is not a reliable indicator of future performance. Past index performance is usually highlighted in blue and designated as 'Live'. Past simulated index performance is usually not highlighted. Past and / or Past simulated index performance is provided for a period of at least 10 years, unless the instruments underlying the index were only available or succinctly liquid for a lesser period. In that case, Past and Past simulated index performance is provided from the time when the instruments underlying the index were available or succinctly liquid. Unless stated otherwise, performance, volatility, Sharpe ratio and correlation data are calculated using monthly returns and maximum drawdown data are calculated using daily returns.

The index methodology is available for review upon request, subject to the execution of a non-disclosure agreement. The performance data reflect all costs, charges and fees that are incorporated into the index formula (if any). Depending on the transaction/product terms, additional charges may apply as part of the transaction/product; such charges are not reflected in the performance statistics. HSBC or an affiliate of HSBC prepared the provided performance information (including the simulated performance information), may be the index sponsor and potentially is the counter-party to a transaction referencing the index.
